<p>2. Connect the customer display on the rear cover with 4pcs M4*11.5 screws.</p>	 <p>M4*11.5</p>

## MSR Installation

<p>1. Connect the data cable of MSR to the seat of pinboard.</p>	
<p>2. Fix the MSR with 2pcs M3*6 supplied screws.</p>	 <p>M3*6</p>

## MSR Setup

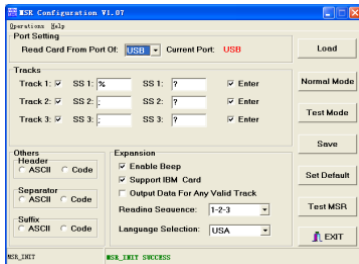

AX6W-15J19 magnetic card reader supports USB communication. The setup program is usually stored in the E:\Tools\ENG\MSR folder of the machine's hard drive. Program icons are as follows:

1. Double-click the icon, open the program, the system will automatically scan the card reader connected to the motherboard interface. The two interfaces of AX6W-15J19 are connected with USB port by default when the machines are produced. As shown in the figure: Green words represent connected, red words represent not connected. Click "continue".

2. This interface is used to set the card reader. Select read card from point of USB in "Port Setting"; select tracks to read magnetic card and whether to add a enter after reading data in "Track"; "Save" is used to save the current Settings; "Load" is used to save the current Settings "set Default" is used to restore the factory default settings Click "test MSR".

3. The test interface is as follows.

**Tagging: Android models without this setting.**

## Troubleshooting

A few common hardware problems and suggested solutions are presented in the table below:

PROBLEM	SOLUTION
The display is dark.	Make sure that the Power LED is on and machine is not in sleeping mode.
The following message appears when booting up: “Invalid system disk, replace the disk, and then press any key”.	Ensure that the operating system is correctly installed; Check the boot sequence in the BIOS setup utility.
An unidentified error message is displayed.	Reboot the machine. Run the BIOS Setup Utility and check its parameters.
Touchscreen failure.	Calibration the touch screen, or install the driver again.
Can't turn on the machine.	Make sure the AC Adapter is connected and the external power supply is normal; make sure the adapter LED is on; make sure the POS power LED is on.
Display is not clear.	Set the resolutions to 1024*768.
The date or time is wrong.	Change the date or time in BIOS or OS, and change the button battery if no help.
The MSR doesn't work.	Try another kind of card; check the cable connection of the MSR; reset the MSR.

**NOTE:** Please don't dismantle the machine without related guide. Please consult your service provider first if problem can't be solved.
